Tutorials for Decision Procedures Exercise sheet 11

Exercise 1: Nelson-Oppen

8 Points

Apply the deterministic version of Nelson-Oppen to the following $T_E \cup T_Q$ -formulae:

- (a) $x + y = z \wedge f(z) = x + y \wedge f(f(x + y)) \neq z.$
- (b) $g(x + y, z) = f(g(x, y)) \wedge x + z = y \wedge z \geq 0 \wedge x \geq y \wedge g(x, x) = z \wedge f(z) \neq g(2x, 0)$

Exercise 2: DPLL(T)

Consider the following formula

$$\begin{aligned} & f_b(i) \neq f_c(i) \wedge \\ & f_b(j) = v \wedge (i \neq j \rightarrow f_b(i) = f_a(i)) \wedge \\ & f_c(j) = v \wedge (i \neq j \rightarrow f_c(i) = f_a(i)) \end{aligned}$$

- (a) Compute the propositional core in CNF.
- (b) Run the DPLL(T) algorithm by repeatedly applying the rules from the lecture. Is the formula satisfiable?
