Software Engineering
Errata for the Course Slides

July 21, 2016

Contents

Lecture 1: Introduction 1
Slide 31, ‘Organisation: Exam’ .............................................. 1

Lecture 7: Decision Tables 1
Slide 12, ‘Another Example’ ............................................... 1

Lecture 10: Requirements Engineering Wrap-Up 1
Slide 6, ‘Pre-Charts’ .......................................................... 1

Lecture 12: Structural Software Modelling 2
Slide 27, Anonymous Objects .............................................. 2

Lecture 13: Behavioural Software Modelling 2
Slide 9, Operational Semantics of CFA .................................... 2

Lecture 1: Introduction

Slide 31, ‘Organisation: Exam’
Overall, we have seven exercise sheets, number 0 to 6, so the slide has to read:

• 20 regular admission points on exercise sheets 1–5, and
  10 regular admission points on sheets 0 and 7
  → 120 regular admission points for 100%.

Lecture 7: Decision Tables

Slide 12, ‘Another Example’
The second bullet point below the ‘cash a cheque’ table should read:

   database says: credit limit exceeded by more than 500 € but payment history ok,
Lecture 10: Requirements Engineering Wrap-Up

Slide 6, ‘Pre-Charts’
The third row in each condition for ‘am = initial’ of the table should read

\[ w^1, \ldots, w^m, \]

and for ‘am = invariant’ it should read

\[ w^{k+1}, \ldots, w^m, \]

that is we consider the sequence consisting of the first (or \( k + 1 \)-th) to \( m \)-th letter in word \( w \). (\( w/1 \) would be the suffix of \( w \) starting with the letter with index 1.)

Lecture 12: Structural Software Modelling

Slide 27, Anonymous Objects
The formula in the equation environment should read:

\[ \{1_C \mapsto \{p \mapsto \emptyset, n \mapsto \{c\}\}, c \mapsto \{p \mapsto \emptyset, n \mapsto \emptyset\}, d \mapsto \{p \mapsto \{c\}, x \mapsto 23\}\} \]

Lecture 13: Behavioural Software Modelling

Slide 9, Operational Semantics of CFA
It is CFA (not FCA).
